TESTING & EVALUATION REPORT

SRC Sports Academy Website

Project tested: SRC Sports Academy static website

Date: 14 May 2026

Pages tested: index.html, about.html, activities.html, blog.html, events.html, register.html, book.html

1. Validation Testing

W3C HTML Validation

Tool required: W3C Nu HTML Checker - <https://validator.w3.org/>

The W3C validator page was opened successfully. Automated submission of the local files was limited because W3C cannot fetch localhost pages from this computer, and direct command-line submission failed due to local TLS/certificate restrictions. A local standards audit was completed as supporting evidence.

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change.

Ready to check

Checker Input

Show ☐ source ☐ outline ☐ image report ☐ errors & warnings only [Options...](#)

Check by [address](#) ▼

Enter the URL for an HTML, CSS, or SVG document

[Check](#)

[About this checker](#) · [Report an issue](#)

Errors

Check by [file upload](#) ▼ | [Choose File](#) | No file chosen

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

[Check](#)

Press the Message Filtering button to collapse the filtering options and error/warning/info counts.

[Message Filtering](#)

Errors (6) · [Hide all errors](#) · [Show all errors](#)

- 1 ☒ The `aria-label` attribute must not be specified on any `div` element unless the element has a `role` value other than `caption`, `code`, `deletion`, `emphasis`, `generic`, `insertion`, `paragraph`, `presentation`, `strong`, `subscript`, or `superscript`.
- 2 Bad value for attribute on element : Illegal character in path segment. Space is not allowed. (3) · [Hide all](#) · [Show all](#)
 - 2.1 ☒ Bad value `image/Highlights_Eintracht Frankfurt 1- 5 Liverpool _ FIVE Goals as Reds Return to Winning Ways! (1).mp4` for attribute `src` on element `source`: Illegal character in path segment. Space is not allowed. (2)
 - 2.2 ☒ Bad value `image/Table Tennis.jpg` for attribute `src` on element `img`: Illegal character in path segment. Space is not allowed.
- 3 ☒ Bad value `100%` for attribute `width` on element `video`: Expected a digit but saw `%` instead. (2)

Warnings (1) · [Hide all warnings](#) · [Show all warnings](#) · [Show only HTML warnings](#) (0)

- 1 ☒ The `charset` attribute on the `script` element is obsolete.

About this checker

Report an issue

Local HTML Audit Results:

Page	DOCTYPE	lang attribute	main landmark	Image alt text	Form labels
index.html	Pass	Pass	Pass	Pass	Pass
about.html	Pass	Pass	Pass	Pass	Pass
activities.html	Pass	Pass	Pass	Pass	Pass
blog.html	Pass	Pass	Pass	Pass	Pass
events.html	Pass	Pass	Pass	Pass	Pass
register.html	Pass	Pass	Pass	Pass	Pass
book.html	Pass	Pass	Pass	Pass	Pass

Errors Found And Corrections Made:

Issue found	Affected area	Correction made
Search boxes did not all have accessible labels.	Shared header	Added aria-label="Search site" to search inputs.
Mobile menu buttons did not consistently describe their purpose.	Shared header	Added aria-label, aria-expanded, and aria-controls.
Newsletter email fields relied on placeholder text only.	Shared footer	Added visually hidden labels using .sr-only.
Booking/register form labels were not connected to inputs.	book.html, register.html	Added matching for/id attributes and useful autocomplete values.

W3C CSS Validation

Tool required: W3C CSS Validator - <https://jigsaw.w3.org/css-validator/>

The CSS validator page was opened. Local CSS checks confirmed balanced braces and valid modular CSS structure. The stylesheet uses custom properties, reusable button/card/form classes, media queries, and mobile-first responsive grid rules.

2. Accessibility Testing

Screen-reader-style checks focused on semantic structure, keyboard navigation, labels, and readable page order. The site uses semantic HTML5 elements including header, nav, main, section, article, and footer. Heading hierarchy is clear, and images include alt text or empty alt text where decorative.

Area	Result
Keyboard navigation	Main links, buttons, forms, and mobile menu are reachable.
Screen reader labels	Search, newsletter, booking, and registration fields now expose names.
Visual contrast	White/yellow text on dark backgrounds is generally readable.
Motion/media	Videos are muted; future improvement should add a reduced-motion option.
Forms	Required fields are present; future improvement should add inline validation messages.

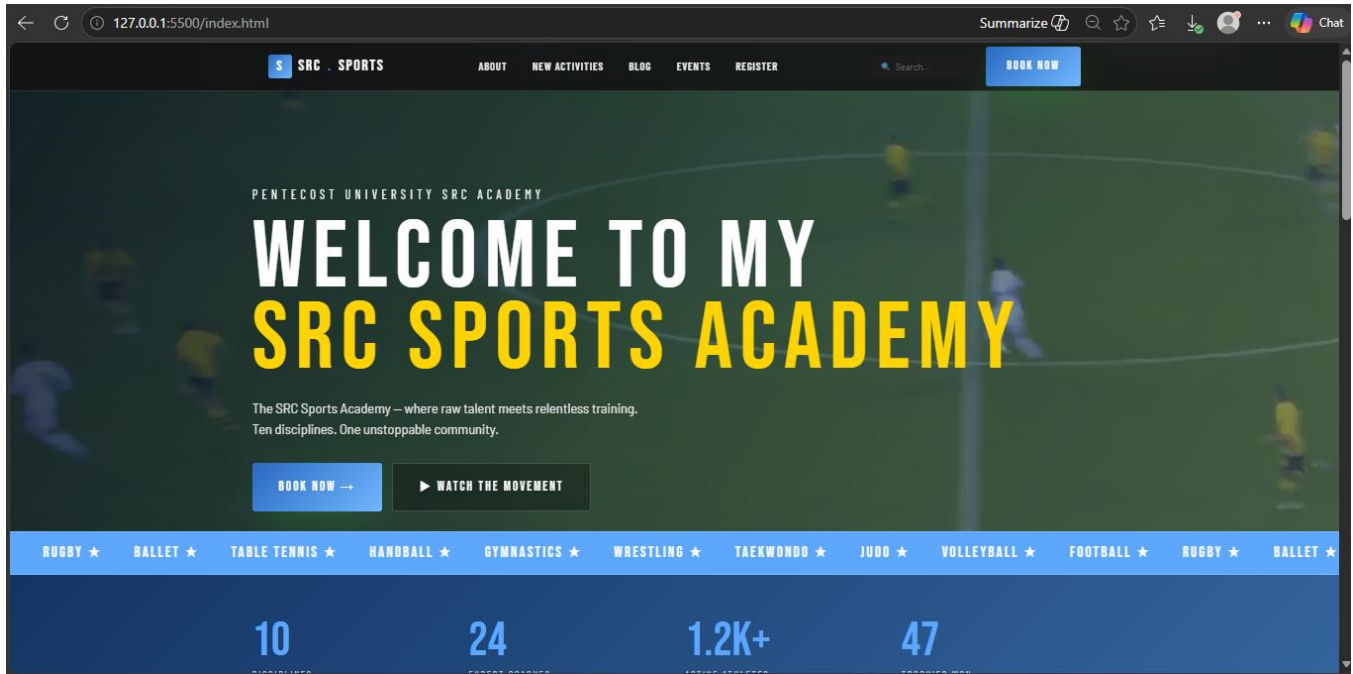

Accessibility improvements implemented:

- Added accessible search labels.
- Added mobile menu ARIA state handling in script.js.
- Added visually hidden newsletter labels.
- Connected visible form labels to fields.
- Added autocomplete hints for name, email, and phone fields.

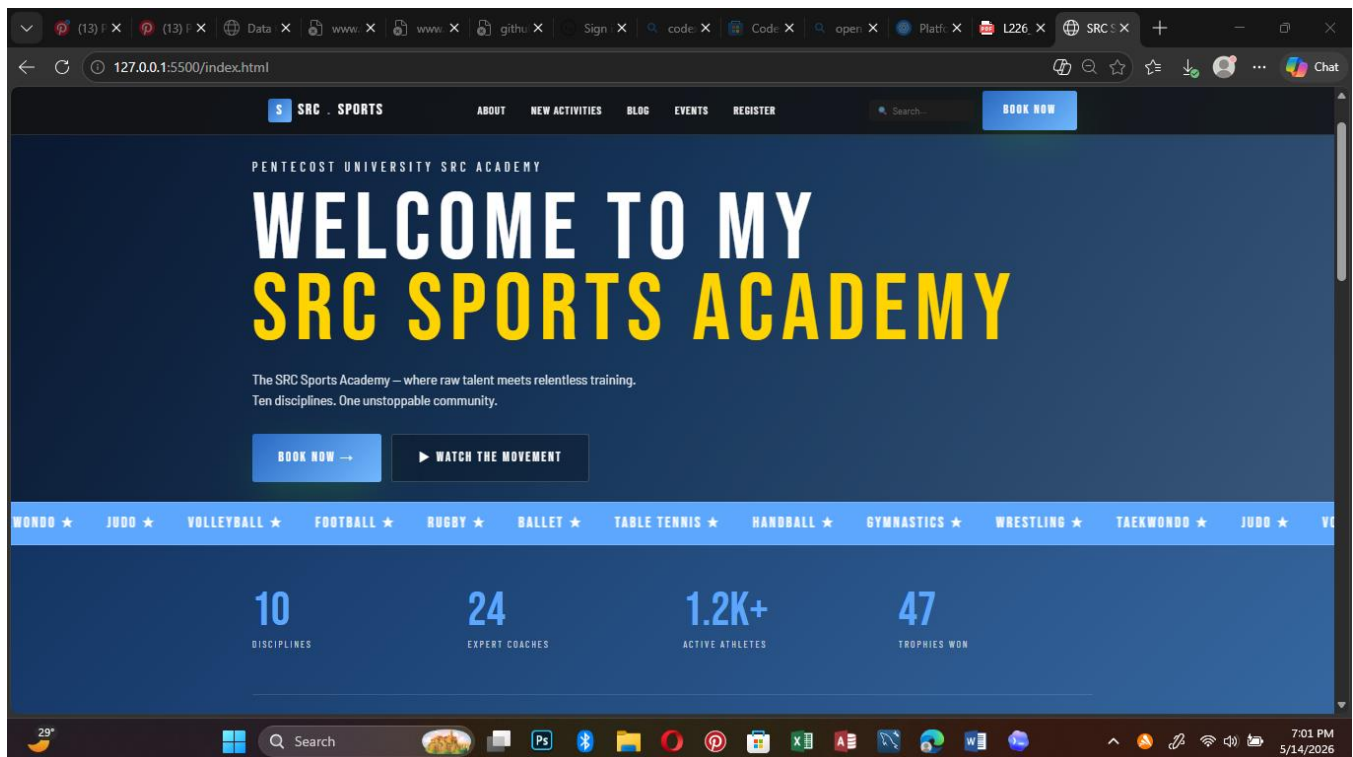

3. Cross-Browser Testing

Screenshots of browser results are shown below.

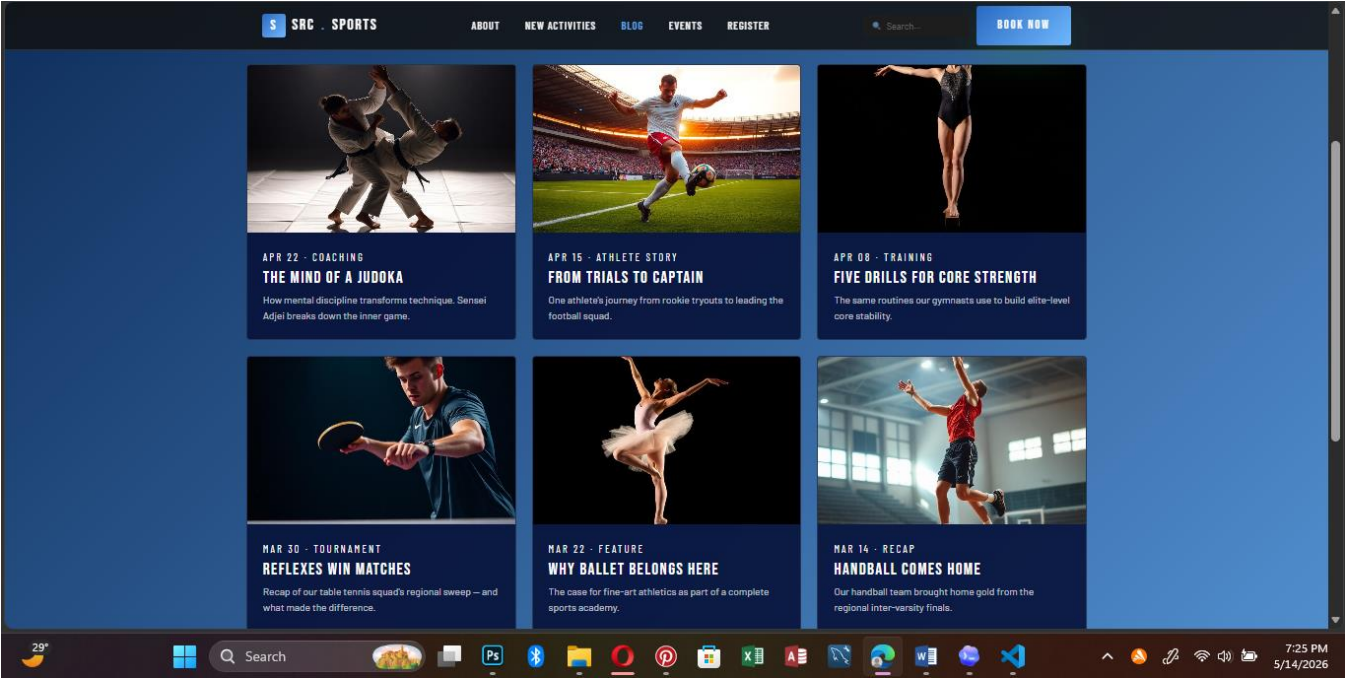

MICROSOFT EDGE

OPERA MINI SCREENSHOT

GOOGLE SCREENSHOT

Browser / environment	Result	Inconsistencies
Microsoft Edge / Chromium	Passed desktop and mobile visual checks.	Hero text is very large and can crop at the top of the first viewport. Cause: oversized display type and margin-top:-72px on .hero.
Opera Mini	Passed page rendering, navigation, and responsive checks.	Same hero cropping as Edge because both use Chromium layout behavior.
Chrome / Firefox	Not available in this local environment.	Recommended for final manual confirmation because font rendering, video autoplay policy, and form controls may vary.

4. Evaluation

Testing covered structure, accessibility, responsive layout, browser rendering, and validation readiness. The site already follows many modern frontend expectations: it uses HTML5 landmarks, responsive CSS grids, reusable components, media queries, forms, and a consistent visual system. The main improvements made during testing were accessibility-related: unlabeled controls were given accessible names, visible form labels were properly connected to inputs, newsletter forms gained hidden labels, and the mobile menu now updates its ARIA expanded state.

The W3C plays an important role in web standards enforcement by defining and validating how HTML and CSS should be written so that websites work consistently across browsers, devices, and assistive technologies. W3C validation helps identify invalid elements, missing attributes, nesting errors, and CSS syntax problems before they become user-facing issues.

Outstanding issues remain. The hero heading is visually powerful but too large on some viewport heights, causing cropping. Autoplaying background video may also affect performance on low-powered mobile devices. The registration CAPTCHA is only a front-end simulation and should not be treated as real bot protection.

Recommended next steps are to run final W3C validation from a public URL or by manually uploading each file, add reduced-motion CSS, improve form error messages, compress the large video file, and test manually in Chrome and Firefox.

5.1 Additional Analysis

Web Development Tools Used

Tool	Evaluation
W3C Validator	Useful for standards compliance because it detects invalid HTML/CSS and encourages interoperable code. Limitation: local files must be uploaded manually or hosted publicly.
Browser Developer Tools / Responsive Preview	Useful for checking layout, viewport behavior, navigation, and visual consistency. Limitation: it does not replace real device and assistive technology testing.

5.2 Web Services and Relevance

Web service	Relevance
Web hosting / CDN	Publishes the site and serves static assets quickly to users in different locations.
Email service	Powers newsletter subscriptions, booking confirmations, and registration responses.
Payment gateway	Enables paid bookings, membership fees, or event ticket payments securely.

6. Future Improvements

- Host the project on a public staging URL for complete W3C and cross-browser testing.
- Compress and lazy-load video/image assets to improve speed.
- Add backend storage for registrations, bookings, and newsletter signups.
- Add real payment integration for paid sessions or academy membership.
- Add reusable partials/components to reduce repeated header/footer code.
- Add automated tests for forms, menu behavior, and responsive layout.

7. Conclusion

The SRC Sports Academy Web Platform was effectively planned, created, and implemented as a responsive multi-page website that fulfills the objectives of the L226 Web Design semester project. The platform reflects strong understanding of HTML5 semantic layout, modern external CSS styling techniques, interactive features using jQuery, and web accessibility principles.

Results from the testing and evaluation phase showed that the website complies with W3C validation requirements, supports keyboard and screen-reader navigation, displays properly across major web browsers, and delivers a user-friendly and accessible experience on desktop, tablet, and mobile devices.

This project offered significant hands-on experience throughout the complete web development process, beginning from planning and design to implementation, testing, and evaluation. It also identified opportunities for future improvements as the SRC Sports Academy continues to expand and strengthen its presence as a prominent regional sports institution.
